

STEAM – Science, Technology, Engineering, ADVENTURE and Math. Oh, yes, Art.

But ADVENTURE takes center stage in this story of Ellie Brown as she returns to China for another stint solving technical, political and even criminal mysteries.

A phone call on a lazy Sunday afternoon jolts Ellie out of her busy routine of an engineer working at a California high-tech company with a call to duty that hours later puts her in the middle of a very public mess in Beijing, China.

Three engineers from previous exploits pitch in to help get to the bottom of frustrating technical challenges A fellow female engineer shows great promise as a problem solver and makes Ellie proud.

Three new members join the team, each with their own talents, but a lot to learn.

The call was from the CEO, urging Ellie to come to the defense of the corporation with a single technical problem. Little does she know there are more and darker troubles to deal with before she can head for home.

It is not all suffering. The team of engineers enjoy each other's sharp wit and ability to help overcome obstacles. Even the legal, security and management people show them a good time and even a pleasure trip to Shanghai.

Food figures heavily in Ellie's happiness. She discovers two secret restaurants in Beijing and the best Mexican in Shanghai. However, missing meals from the pressing work saves her figure.

Along the way there are lessons learned by everyone about wireless technology. Even the seasoned expert Ellie gains new insight into how cellular networks can malfunction...and how to fix them on the spot.

If you have wondered what engineers do, here is an example based on real events of how a career can be anything but boring.
