Hardcover: \$24.99, ISBN-13: 979-8316452736

Available: Amazon, <https://vqr.vc/cETXdDKqN>

Synopsis: Ellie Brown is a seasoned engineer specializing in troubleshooting and fixing digital cellular problems. An urgent phone call from the CEO of her company launches her on a mad dash from San Diego to Beijing to meet up with her team of Chinese engineers and attempt to solve a system outage that threatens to shut down Cphone, a major customer.

Ellie quickly learns that it is not one simple technical problem she is up against. Even people in the government are working to side-track her. There are two other serious problems that must be solved, and Ellie and her engineers have to knock them all out to save Cphone from being liquidated by the government.

5-Star Review: Both my daughter and I thoroughly enjoyed this book. We've been looking for STEM books on engineering; but, with this book centering on a story of true events, this was an added bonus that you don't find very often. It's not just about technology. Thrown in is the unexpected surprise of company politics and relationships that can be expected when working on company projects.
